Methodology 33
Integration of sustainability into the core of business is a key focus for business in the short-term and one that will help fast-forward long-term progress on core sustainability issues.

- For business today, integration of sustainability into core business functions is by far the most important leadership challenge.

- Integration across the value chain is also important for solutions on climate; “working effectively with business units to achieve solutions” is identified as the greatest challenge to companies’ climate sustainability efforts.

- Integrating sustainability is also highlighted as the most important thing that business needs to focus on to fast-forward sustainability over the next 20 years.

- Sustainability reporting is perceived to be one of the areas in which business has made the most progress over the past 20 years, and the area in which the most progress is expected over the next 20 years.

- Historically, water is a difficult issue, but it is expected that business will make strides on this issue over the next 20 years.

- Similarly, progress in sustainable consumption is perceived to have been a difficult issue for business over the past 20 years, and this is expected to continue.
Executive Summary
Executive Summary

The most important leadership challenge facing business today is the integration of sustainability into core business functions.

- Almost two-thirds (62 percent) of respondents selected this as the most significant challenge. (This was the exact same result of our findings in 2011.)

Integrating sustainability into business is perceived to be the most important focus for business in order to fast-forward progress on sustainability.

- When asked to spontaneously name what they think needs to be the focus for business over the next 20 years, comments related to integrating sustainability into business are the most mentioned.

Significant progress is perceived to have been made over the past 20 years on sustainability reporting, and this is perceived to be the area where most future progress will be made.

- Health and safety and sustainability reporting are the two areas in which respondents believe business has made the most significant progress over the past 20 years.
- Looking into the future, sustainability reporting is also the area in which business is expected to be able to make the most progress.
- Water is one of the issues that respondents believe business has made the least progress on over the past 20 years. However, when looking to the next 20 years, it is believed to be one of the issues on which business will make the most progress.
- Two of the areas in which respondents believe business has made the least progress, sustainable consumption and public policy, are areas that appear to be the greatest challenges for future progress.
Executive Summary

Respondents expect human rights, workers’ rights, and climate change to be the focus of their organization’s sustainability efforts over the next year.

- The focus of business’ sustainability efforts over the next 12 months is consistent with 2011 findings. “Workers’ rights” and “human rights” are considered to be the most urgent priorities for businesses’ sustainability efforts. “Climate change,” while still an a vital focus area, has seen a gradual decline since 2009.

Energy management in operations is overwhelmingly seen as the main priority in carbon reduction strategies.

- Seven-in-ten (71 percent) respondents report energy management as the main priority followed by working with supply chain and products waste and recycling.

The main challenges for climate sustainability relate to effectively coordinating business units.

- Working effectively with business units throughout the value chain to achieve solutions is seen by far as the main challenge.
- The related challenges of establishing an impactful strategy, scaling up projects globally, and gaining resource commitments from senior management are also seen as significant challenges.
Executive Summary

The belief that the public currently has little trust in business continues, despite some moderation in perceived levels of distrust.

- Companies can **build trust** by being increasingly transparent about business practices and by measuring and demonstrating positive social and environmental impacts.
- The importance of creating innovative sustainable products in helping to improve the public’s trust in business has continued to increase since 2010, and this is by far the greatest perceived driver of **business success**.
- The areas where business is deemed to be showing the **greatest leadership** is in measuring and demonstrating social and environmental impacts and responding promptly and effectively to accidents and quality issues.
Detailed Findings
Leadership
Most Important Leadership Challenges

Combined Mentions, 2011–2012

- Convincing investors that sustainability enhances value: 29 (2012), 30 (2011)
- Setting ambitious sustainability targets: 14 (2012), 14 (2011)
- Going beyond regulations: 13 (2012), 14 (2011)
- Developing enduring partnerships with non-traditional partners: 11 (2012), 12 (2011)
- Public advocacy for policies that promote sustainability: 10 (2012), 10 (2011)

The most important leadership challenges identified by respondents are remarkably consistent with 12 months ago.

From the list of challenges presented to respondents, the most important remains, by far, the integration of sustainability into core business functions.

Other significant barriers are planning for the long term and convincing investors that sustainability enhances value.
CSR/Sustainability Within the Organization
When you think about the focus of your company’s [organization’s] corporate social responsibility (CSR)/sustainability efforts in the next 12 months, how much of a priority are each of the following issues?

1. "Human rights" has seen a gradual increase since 2009 in the proportion saying that it is a priority.
2. "Worker’s rights" has replaced "climate change" as the second-greatest priority.
3. "Climate change" continues to be a priority for organizations’ CSR/sustainability efforts, with almost two-thirds stating it is a priority, although this has fallen slightly since 2009.
4. Between 2010 and 2011 there was a substantial increase in the percentage saying that “Water availability/quality” is a priority for sustainability efforts, and this was maintained in 2012.

*Percentage of respondents who selected 4 or 5 on 5-point scale where 1 is “not at all a priority” and 5 is “a very significant priority.”
Does your company [organization] currently measure the return on investment (ROI) for any of its CSR/sustainability efforts?

Why does your company [organization] currently not measure the return on investment (ROI) for any of its CSR/sustainability efforts?

The following reasons are given for currently not measuring ROI:

- Hard to / measure (24 percent)
- No interest demand or need (22 percent)
- Limited resources (8 percent)
- Do not know how to (7 percent)

Following a three year gradual increase in the proportion of respondents reporting that their company measures the return on investment of their CSR/sustainability efforts, this has leveled out in 2012. However, there has been a decrease in the proportion of respondents indicating that they will measure ROI soon.
Building Trust
On balance, respondents remain pessimistic about the current level of public trust in the private sector. The majority are neutral in terms of the level of trust they feel people have, with over a quarter (26 percent) believing the public has little trust. However, the proportion believing the public does trust business has increased gradually over the past three years.

Note: Based on a 5-point scale where 1 is “no trust at all” and 5 is “a great deal of trust.”

2t. How much trust do you believe the public has in business today?
Which of the following are the most important actions companies should take to improve public trust in business?

As in 2011 and 2010, respondents this year believe the best ways for companies to improve trust in business are by being more transparent, demonstrating positive impact (although this has decreased by 8 percentage points since 2010), and creating innovative products and business models (which has increased by 11 percentage points since 2010).
In which three of the following areas is business showing the greatest leadership today?

Results are broadly consistent with 2011 and there continues to be no majority view as to the area in which business is currently showing the greatest leadership.

Respondents are most likely to think that business is doing a good job at measuring and demonstrating positive impacts (which is also cited as one of the most important ways for business to build its trust among the public).

Creating innovative sustainable products and business models has seen a notable decline since 2011 and an overall decline since 2010.
3.3t And which three of the following areas are the most important drivers of overall business success?

Innovating for sustainability is by far the most important driver of overall business success, and this has shown consistency over the past three years. However, while this is clearly the most important driver of business success identified by respondents, it has seen a decline in the proportion believing business is showing leadership in this area (see previous slide).
The chart above summarizes the results of questions 3.1, 3.2 and 3.3.

Increasing transparency, demonstrating positive environmental and social impacts, and innovating for sustainability continue to be the most strategic initiatives for business to help drive public trust, business successes and demonstrate leadership.
Climate Change
5. Which of the following, if any, will be priorities for your company’s carbon reduction efforts over the next 12 months?

The three highest priorities identified by respondents for their companies’ carbon reduction strategies are very much interlinked.

Energy management in operations is by far the greatest priority for respondents’ companies followed by working with the supply chain, and product waste and recycling (which score similarly). Employee commuting, low-carbon siting, and consumer engagement are relatively low priorities.
6. Which two of the following pose the greatest challenges to your company’s climate sustainability efforts?

- Coordinating solutions with business units throughout the value chain is seen as by far the greatest challenge for climate sustainability.
- Strategic impact and scaling up projects globally are second tier concerns.
Developments in CSR/Sustainability
### Top 10 Mentions, 2012

#### PAST 12 MONTHS
- Something my company has done (specific mentions)
- New legislation/reports/initiatives (specific mentions)
- CSR awareness/engagement (in general)
- Labor/supply chain issues
- Conflict minerals
- Focus on sustainable development
- Rio+20
- Climate change
- Human/workers’ rights
- Carbon tracking/taxes

#### NEXT 12 MONTHS
- Broader/great adoption/focus/integration of CSR/sustainability
- Supply chain issues
- Something my company will do (specific mentions)
- Human rights issues
- US election
- Environmental issues/protection/Climate change
- Transparency
- Energy/energy efficiency/renewable energy
- Water issues
- Carbon accounting/tax

The most specific mentioned development over the past 12 months to respondents is something that their own company has done, followed by mentions of specific initiatives, legislations or reports that have occurred.

A wide range of developments are thought to be likely to occur over the next 12 months, with the most mentioned being the broader adoption or integration of sustainability by business.

7. Over the past 12 months, what has been the most significant development, event, or other news related to CSR/sustainability?

8. Over the next 12 months, what do you think will be the most significant development in CSR/sustainability?
Past & Future Progress on Sustainability

- Respondents were asked to rate how much progress business had made over the past 20 years on a range of sustainability issues.

- Following this they were then asked to rate how much progress business will make on the same set of issues over the next 20 years.

- Health and safety and sustainability reporting are the two areas in which respondents believe business has made the most significant progress over the past 20 years.

- Looking to the future for these two areas, respondents believe that sustainability reporting will be the area in which business can make the most progress. While there is a belief that health and safety will continue to see progress, it is not to the same degree.

- Water is one of the issues in which respondents believe business has made the least progress over the past 20 years. However, when looking to the next 20 years, it is believed to be one of the issues in which business will make the most progress.

- Two of the areas in which respondents believe business has made the least progress—sustainable consumption and public policy—are two areas that appear to be the greatest challenges. Relative to the other issues, less progress on sustainable consumption and public policy is predicted to be made over the next 20 years.
11. How much progress, if any, do you think business has made over the last 20 years on the following elements of sustainability? Please use a 5-point scale, where 1 means “no progress at all” and 5 means “a great deal of progress.”
12. And, how much progress, if any, do you think business will make over the next 20 years on the following elements of sustainability? Please use a 5-point scale, where 1 means “no progress at all” and 5 means “a great deal of progress.”

</table>
The chart highlights that while water is an issue where, over the past 20 years, a lower level of progress is perceived to have occurred, it is the area where the greatest progress is expected to occur over the next 20 years.

Alternatively, while progress on sustainable consumption over the past 20 years is perceived to have been relatively low compared to other areas, expectations are lower that progress will be made over the next 20 years.

**Historic progress**
11. How much progress, if any, do you think business has made over the last 20 years on the following elements of sustainability?

**Expected future performance**
12. And, how much progress, if any, do you think business will make over the next 20 years on the following elements of sustainability?
Q13. Thinking about the next 20 years, what do you think businesses need to focus on the most in order to fast-forward progress on sustainability?

By far the most important focus for business to fast-forward progress on sustainability over the next 20 years is integrating sustainability into business. The next most mentioned focus is on environmental issues/energy efficiency.
Most Important Focus for Business to Fast-Forward Progress on Sustainability in Next 20 Years

Q13. Thinking about the next 20 years, what do you think businesses need to focus on the most in order to fast-forward progress on sustainability?

- “A new business model that includes sustainability not as a specialty but embedded in the business formula.”
- “Deep cultural shift within companies by embedding measurable sustainability metrics into the job description of everyone in the company, and integrating reporting.”
- “Business needs to completely incorporate sustainability as a way of doing business. Much like ethics or total quality management, it needs to permeate every decision and every part of the operation so that it becomes an unavoidable path to long term success.”
- “The integration of sustainability initiatives with overall financial performance of the company and market value of the company. If these can be linked, sustainability initiatives will progress at a much faster speed.”
- “Engaging all parts of the business in sustainability. Standalone sustainability department has an important role to play—but in reality cannot deliver real change alone.”
Integration of Sustainability Reporting

All respondents, 2012

- Yes—we have an integrated report (38)
- No—and no plans to do so (36)
- Not currently—but will soon (17)
- Don’t know (9)

Over half report that their company does not integrate sustainability reporting into its annual report currently. However, nearly a fifth (17 percent) plan to do so soon.

10. Does your company currently integrate its sustainability reporting with its annual report?
Methodology
The BSR/GlobeScan State of Sustainable Business Poll 2012 was conducted between September 6–24, 2012.

A total of 556 professionals from BSR member organizations completed the survey.

Unless otherwise noted, figures in charts refer to percentage of respondents.

The sample population was comprised of representatives from business, NGOs, government, and academia, representing Africa, Asia/Pacific, Europe, Latin America, and North America.
