

Strengthening Resilience and Sustainability with BSR's Value Chain Leadership Ladder

Value chains are widely recognized as a critical lever to sustainability progress, with the potential to impact billions of livelihoods and ecosystems across the globe.

A comprehensive supply chain sustainability program helps companies achieve business and sustainability goals across the entire value chain by reducing risks, navigating regulations, addressing business-critical stakeholder interests and needs, and driving innovation for resilient, collaborative, future-fit supply chains.

BSR's Value Chain Leadership Ladder (VCLL) helps companies evaluate and evolve the maturity of their value chain sustainability processes and programs based on a 5-point maturity scale. This diagnostic enables companies to understand the strengths and gaps in their current approach and what practical steps they can take to build the resilience and sustainability of their value chain.

KEY ELEMENTS OF BSR'S VALUE CHAIN MATURITY ASSESSMENT

Evaluate the level of maturity of a supply chain and/or value chain sustainability program

- The framework helps you to determine your company's current state of maturity across eight core elements of effective supply chain management and to set ambition based on your Current State Assessment.

Benchmark against peer and leading companies using the framework

- Insights on peer and leading practices across the eight internal and external dimensions of the assessment, customized around key areas of concern for your company.

Formulate a path to strengthen resilience and sustainability based on assessment findings

- Recommendations on how to address key risks and opportunities, building capacity internally as well as with your suppliers and other business partners.
