We Mean Business

How We Work

We catalyze business action on climate change in two ways: by helping companies reduce greenhouse gas emissions to hold global warming well below 2°C (3.6°F) and by building resilience to climate impacts throughout company operations and value chains.

Our approach includes translating the best available climate knowledge for the private sector, shaping policy environments that enable business leadership, developing strategies for companies to reduce emissions and build climate resilience, and facilitating collaborative initiatives that enable systemic change across industries and stakeholder groups.

Capabilities

- Cross-disciplinary expertise on climate change spanning science, economics, regulation, and private sector best practices
- Deep expertise on how climate intersects with the energy, agriculture, transport, finance, and information and communications technology industries
- Identifying opportunities resulting from the strong and multifaceted business case for climate action
- Developing and implementing ambitious climate strategies for business, including:
 - GHG materiality analysis and carbon abatement lever identification
 - Setting and implementing science-based emissions reductions goals
 - Assessing and reporting climate risks
 - Supplier engagement to reduce emissions and build climate resilience across the value chain
- Stakeholder engagement and facilitating partnerships across the landscape of organizations working on climate change
- Leadership of collaborative initiatives to advance industry-wide climate solutions

Business Benefits

- Recognized sustainability leadership among peers
- Alignment with inbound climate and energy regulation across jurisdictions
- Cost savings and reduced variability of operating costs
- Strengthened relationships with shareholders and suppliers
- Improved brand equity with consumers
- Opportunities to shape regulatory environment on climate and energy

Our Insights

BLOG

The Clean Power Plan Is Bold Policy that Will Benefit the Economy

The U.S. Clean Power Plan is one of the most significant pieces of environmental policy the United States has ever seen, and it will help companies remove barriers to climate goals and reduce business risk.
