

Power and Utilities

The power and utilities industries are central to global sustainability, particularly on the topics of climate change and inclusive growth.

COMPANIES

ComEd
DONG Energy
Duke Energy Corporation
Engie Hydro-Québec
NRG Energy, Inc.
Semptra Energy
SunEdison LLC
Vermont Energy Investment Corporation

How We Work

The electricity and heat sectors account for approximately 40 percent of total greenhouse gas emissions, and the United Nations Sustainable Development Goals include access to water and energy as keys to global development.

BSR works with power and utility companies at both the corporate and asset levels on sustainability strategies, corporate responsibility disclosures, environmental efforts, stakeholder engagement, and sustainable supply chains. In addition, we foster several collaborations between our industry members and corporate clients.

Our Focus

- Corporate collaborations on energy and emissions
- Corporate responsibility governance
- Ecosystem services
- Renewable energy
- Reporting and disclosure
- Sustainable supply chains
